
dota2 Documentation

Release 1.1.0

1.1.0

May 02, 2021

Contents

1	Getting started	3
1.1	User Guide	3
2	API Documentation	7
2.1	dota2 API	7
3	Indices and tables	89
	Python Module Index	91
	Index	93

Supports Python 2.7+ and 3.4+.

Module based on [steam](#) for interacting with Dota 2's Game Coordinator.
If you've used [node-dota2](#) this module should feel familiar.

As always contributions and suggestions are welcome. Just visit the [repository on github](#).

1.1 User Guide

This part of the documentation is a quick start for writing applications that interact with the game coordinator for Dota 2.

1.1.1 Initialization

Below is an example how to login and get a session with game coordinator. See [steam's docs](#) for details about `SteamClient`.

Note: You won't see any output running the code above. In order to peek inside we need to setup debug logging. See the *Configure console logging* section

```
from steam.client import SteamClient
from dota2.client import Dota2Client

client = SteamClient()
dota = Dota2Client(client)

@client.on('logged_on')
def start_dota():
    dota.launch()

@dota.on('ready')
def do_dota_stuff():
    # talk to GC

client.cli_login()
client.run_forever()
```

1.1.2 Working with events

This module makes use of `gevent` and `gevent-eventemitter`. Working with events is similiar to `EventEmitter` in javascript. Nevertheless, here is quick rundown.

To catch an event we need to register a callback

```
@dota.on('my event')
def do_stuff(a, b):
    print "Hey!"

dota.on('my event', do_stuff)
dota.once('my event', do_stuff) # call do_stuff just one time
dota.wait_event('my event')    # blocks and returns arguments, if any
```

Note: `wait_event` may block forever, so use the `timeout` parameter

Emitting an event is simple

```
dota.emit("my event")
dota.emit("my event", 1, [3,4,5]) # optional arguments
```

That's it. For more details see `gevent-eventemitter`.

1.1.3 Fetch player profile card

You've probably seen the profile cards in Dota 2. They contain player selected stats, such trophies, number of matches, or MMR.

We can request that data using an API from the `features` module.

Let's get Dendi's profile card. All we need is his account id, which is 70388657.

```
@dota.on('ready')
def fetch_profile_card():
    dota.request_profile_card(70388657)

@dota.on('profile_card'):
def print_profile_card(account_id, profile_card):
    if account_id == 70388657:
        print str(profile_card)
```

The profile card request also happens to be a job. `request_profile_card` returns a job id and we can wait for it instead. However, we will not get the same parameters as from `profile_card`

Note: Listening for the job id` will only give you one arugment: the protobuf message

```
@dota.on('ready')
def fetch_profile_card():
    jobid = dota.request_profile_card(70388657)
    profile_card = dota.wait_msg(jobid, timeout=10)

    if profile_card:
        print str(profile_card)
```

Note: Not every request returns a `job_id`, see the API documentation for details

Running the code above will output something like this:

```
account_id: 70388657
background_def_index: 0
slots {
  slot_id: 0
  stat {
    stat_id: k_eStat_FirstMatchDate
    stat_score: 1314309005
  }
}
slots {
  slot_id: 1
  stat {
    stat_id: k_eStat_SoloRank
    stat_score: 6775
  }
}
```

1.1.4 Configure console logging

Here is a basic configuration to get debug messages in the console.

```
import logging

logging.basicConfig(format='[%(asctime)s] %(levelname)s %(name)s: %(message)s',
                    level=logging.DEBUG)
```

When we run the program and the console output should look something like this:

```
[2016-01-01 12:34:56,000] DEBUG CMClient: Connect initiated.
[2016-01-01 12:34:56,000] DEBUG Connection: Attempting connection to ('208.78.164.13',
↳ 27018)
[2016-01-01 12:34:56,000] DEBUG Connection: Connected.
[2016-01-01 12:34:56,000] DEBUG CMClient: Emit event: 'connected'
[2016-01-01 12:34:56,000] DEBUG SteamClient: Emit event: 'connected'
[2016-01-01 12:34:56,000] DEBUG SteamClient: Attempting login
[2016-01-01 12:34:56,000] DEBUG CMClient: Incoming: <Msg <EMsg.ChannelEncryptRequest:
↳ 1303>>
[2016-01-01 12:34:56,000] DEBUG CMClient: Emit event: <EMsg.ChannelEncryptRequest:
↳ 1303>
...
```

2.1 dota2 API

Documentation related to various APIs available in this package.

2.1.1 features

This package contains all high level features of the `dota2.client.Dota2Client`.

player

Features related to community, players and profiles.

class `dota2.features.player.Player`

Bases: `object`

request_profile (*account_id*)

Request profile details

Parameters `account_id` (*int*) – steam account_id

Returns job id

Return type `str`

Response event: `profile_data`

Parameters

- **account_id** (*int*) – account_id from request
- **message** (*proto message*) – `CMsgProfileResponse`

request_gc_profile (*account_id*, *request_name=False*)

Request profile details

Warning: Disabled by Valve

Parameters

- **account_id** (*int*) – steam account_id
- **request_name** (*bool*) – whether to return name

Returns job id

Return type *str*

Response event: gc_profile_data

Parameters

- **account_id** (*int*) – account_id from request
- **erresult** (*steam.enums.common.EResult*) – result enum
- **message** (*proto message*) – CMsgDOTAProfileResponse

request_profile_card (*account_id*)

Request profile card

Parameters **account_id** (*int*) – steam account_id

Returns job id

Return type *str*

Response event: profile_card

Parameters

- **account_id** (*int*) – account_id from request
- **message** (*proto message*) – CMsgDOTAProfileCard

request_player_stats (*account_id*)

Request players stats. These are located in the play style box on a player profile.

Parameters **account_id** (*int*) – steam account_id

Returns job id

Return type *str*

Response event: player_stats

Parameters

- **account_id** (*int*) – account_id from request
- **message** (*proto message*) – CMsgGCToClientPlayerStatsResponse

request_player_info (*account_ids*)

Warning: Disabled by Valve

Request official player information

Parameters **account_id** (*list*) – A list of account ids

Response event: `player_info`

Parameters `message` (*proto message*) – `CMsgGCPlayerInfo`

request_conduct_scorecard ()

Request conduct scorecard, otherwise known as conduct summary

Returns job id

Return type `str`

Response event: `conduct_scorecard`

Parameters `message` (*proto message*) – `CMsgPlayerConductScorecard`

request_hero_standings ()

Request hero stands for the currently logged on account. This is the data from the `stats` tab on your profile.

Response event: `hero_standings`

Parameters `message` (*proto message*) – `CMsgGCGetHeroStandingsResponse`

match

Features related to matches and matchmaking.

class `dota2.features.match.Match`

Bases: `object`

request_matchmaking_stats ()

Request matchmaking statistics

Response event: `matchmaking_stats`

Parameters `message` (*proto message*) – `CMsgDOTAMatchmakingStatsResponse`

request_match_details (*match_id*)

Request match details for a specific match

Note: Rate limited to 100 requests/day

Parameters `match_id` (*int*) – match id

Returns job event id

Return type `str`

Response event: `match_details`

Parameters

- `match_id` (*int*) – match_id for response
- `eresult` (`steam.enums.common.EResult`) – result enum
- `match` (*proto message*) – `CMsgDOTAMatch`

request_matches (***kwargs*)

Request matches. For arguments see `CMsgDOTARequestMatches`

Note: Rate limited to 50 requests/day

Warning: Some of the arguments don't work. Ask Valve

Returns job event id

Return type `str`

Response event: matches

Parameters `message` (*proto message*) – `CMsgDOTARequestMatchesResponse`

request_matches_minimal (*match_ids*)

Request matches with only minimal data.

Parameters `match_ids` (*list*) – match ids

Returns job event id

Return type `str`

Response event: matches_minimal

Parameters `matches` (*list*) – list of `CMsgDOTAMatchMinimal`

request_top_source_tv_games (***kwargs*)

Find top source TV games. For arguments see `CMsgClientToGCFindTopSourceTVGames`

Response event: top_source_tv_games

Parameters `response` (*proto message*) – `CMsgGCToClientFindTopSourceTVGames-Response`

request_player_match_history (***kwargs*)

Request player match history

Parameters

- `account_id` (*int*) – account id
- `start_at_match_id` (*int*) – matches from before this match id (0 for latest)
- `matches_requested` (*int*) – number of matches to return
- `hero_id` (*int*) – filter by hero id
- `request_id` (*int*) – request id to match with the response with the request
- `include_practice_matches` (*bool*) – whether to include practice matches
- `include_custom_games` (*bool*) – whether to include custom matches

Response event: player_match_history

Parameters

- `request_id` (*int*) – request id from the request
- `matches` (*list*) – `CMsgDOTAGetPlayerMatchHistoryResponse.matches`

party

Features related to party invite and communication.

class `dota2.features.party.Party`

Bases: `object`

EVENT_PARTY_INVITE = `'party_invite'`

When a party invite is received

Parameters **message** (*proto message*) – `CSODOTAPartyInvite`

EVENT_NEW_PARTY = `'new_party'`

Entered a party, either by inviting someone or accepting an invite

Parameters **message** (*proto message*) – `CSODOTAParty`

EVENT_PARTY_CHANGED = `'party_changed'`

Anything changes to the party state, leaving/entering/invites etc

Parameters **message** (*proto message*) – `CSODOTAParty`

EVENT_PARTY_REMOVED = `'party_removed'`

Left party, either left, kicked or disbanded

Parameters **message** (*proto message*) – `CSODOTAParty`

EVENT_INVITATION_CREATED = `'invitation_created'`

After inviting another user

Parameters **message** (*proto message*) – `CMsgInvitationCreated`

party = `None`

respond_to_party_invite (*party_id, accept=False*)

Respond to a party invite.

Parameters

- **party_id** – party id
- **accept** – accept

leave_party ()

Leaves the current party.

Returns job event id

Return type `str`

set_party_leader (*steam_id*)

Set the new party leader.

Parameters **steam_id** – steam_id

Returns job event id

Return type `str`

set_party_coach_flag (*coach*)

Set the bot's status as a coach.

Parameters **coach** – bool

Returns job event id

Return type `str`

Response event: `party_coach`

Parameters

- `steam_id` (`int`) – `steam_id` for response
- `message` – `CMsgDOTAPartyMemberSetCoach` proto message

`invite_to_party` (`steam_id`)

Invites a player to a party. This will create a new party if you aren't in one.

Parameters `steam_id` – `steam_id`

Returns job event id

Return type `str`

Response event: `invite_to_party`

Parameters `message` – `CMsgInvitationCreated` proto message

`kick_from_party` (`steam_id`)

Kicks a player from the party. This will create a new party if you aren't in one.

Parameters `steam_id` – `steam_id`

Returns job event id

Return type `str`

Response event: `kick_from_party`

Parameters

- `steam_id` (`int`) – `steam_id` for response
- `message` – `CMsgKickFromParty` proto message

lobby

Lobby related features

```
class dota2.features.lobby.Lobby
```

Bases: `object`

```
EVENT_LOBBY_INVITE = 'lobby_invite'
```

When a lobby invite is received :param message: `CSDOTALobbyInvite` :type message: proto message

```
EVENT_LOBBY_INVITE_REMOVED = 'lobby_invite_removed'
```

When a lobby invite is no longer valid :param message: `CSDOTALobbyInvite` :type message: proto message

```
EVENT_LOBBY_NEW = 'lobby_new'
```

Entered a lobby, either by creating one or accepting an invite

Parameters `message` (`proto message`) – `CSODOTALobby`

```
EVENT_LOBBY_CHANGED = 'lobby_changed'
```

Anything changes to the lobby state, players, options, broadcasters...

Parameters `message` (`proto message`) – `CSODOTALobby`

```
EVENT_LOBBY_REMOVED = 'lobby_removed'
```

The lobby is not valid anymore, quit or kick.

Parameters `message` (`proto message`) – `CSODOTALobby`

lobby = None

create_practice_lobby (*password=""*, *options=None*)

Sends a message to the Game Coordinator requesting to create a lobby.

Parameters

- **password** (*str*) – password of lobby
- **options** (*dict*) – options to setup the lobby with

create_tournament_lobby (*password=""*, *tournament_game_id=None*, *tournament_id=0*, *options=None*)

Sends a message to the Game Coordinator requesting to create a tournament lobby.

Parameters

- **password** (*str*) – password of lobby
- **tournament_game_id** (*int*) – tournament game id
- **tournament_id** (*int*) – tournament id
- **options** (*dict*) – options to setup the lobby with

config_practice_lobby (*options*)

Change settings of the current lobby.

Parameters **options** (*dict*) – options to change in the lobby

get_lobby_list (*server_region=<EServerRegion.Unspecified: 0>*, *game_mode=<DOTA_GameMode.DOTA_GAMEMODE_NONE: 0>*)

Get a lobby list

Note: These are regular lobbies. (e.g. All pick, Captains Mode, etc)

Parameters

- **server_region** (*EServerRegion*) – limit to a specific server region
- **game_mode** (*DOTA_GameMode*) – limit to specific game mode, DOTA_GAMEMODE_NONE means any

Returns List of [CMsgPracticeLobbyListResponseEntry](#)

Return type proto message, None

get_practice_lobby_list (*tournament_games=False*, *password=""*)

Get list of practice lobbies

Note: These are private Custom Game lobbies

Parameters

- **tournament_games** (*bool*) – whether to show tournament games only
- **password** (*str*) – practice lobbies with this password

Returns

List of [CMsgPracticeLobbyListResponseEntry](#)

Return type proto message, None

get_friend_practice_lobby_list ()

Request a list of friend practice lobbies.

Returns

List of `CMsgPracticeLobbyListResponseEntry`

Return type proto message, None

balanced_shuffle_lobby ()

Balance shuffle the the lobby.

flip_lobby_teams ()

Flip both teams of the lobby.

invite_to_lobby (*steam_id*)

Asks to invite a player to your lobby. This creates a new default lobby when you are not already in one.

Parameters `steam_id` (*int*) – steam_id

practice_lobby_kick (*account_id*)

Kick a player from the lobby.

Parameters `account_id` (*int*) – 32-bit steam_id of the user to kick from the lobby

practice_lobby_kick_from_team (*account_id*)

Kick a player from the his current lobby team.

Parameters `account_id` (*int*) – 32-bit steam_id of the user to kick from a team

join_practice_lobby (*id*, *password*=")

Join the target practice lobby.

Parameters

- `id` (*int*) – id of the lobby to join
- `password` (*str*) – password necessary to join the lobby

Returns Result of the join command from the GC

Return type

`class DOTAJoinLobbyResult.` `DOTAJoinLobbyResult.`
`sult.DOTA_JOIN_RESULT_TIMEOUT` if timeout

leave_practice_lobby ()

Sends a message to the Game Coordinator requesting to leave the current lobby.

abandon_current_game ()

Abandon the current game.

launch_practice_lobby ()

Launch the current lobby into a game.

join_practice_lobby_team (*slot*=1, *team*=<`DOTA_GC_TEAM.PLAYER_POOL: 4`>)

Join on of the lobby team at the specified slot.

Parameters

- `slot` (*int*) – slot to join into
- `team` (`DOTA_GC_TEAM`) – team to join

join_practice_lobby_broadcast_channel (*channel=1*)

Join a specific channel of the broadcasters.

Parameters **channel** (*int*) – channel to join into

add_bot_to_practice_lobby (*slot=1*, *team=<DOTA_GC_TEAM.GOOD_GUYS: 0>*,
bot_difficulty=<DOTABotDifficulty.BOT_DIFFICULTY_PASSIVE: 0>)

Add a bot in the lobby.

Parameters

- **slot** (*int*) – slot to join into
- **team** (*DOTA_GC_TEAM*) – team to join
- **bot_difficulty** (*DOTABotDifficulty*) – difficulty of the bot

respond_to_lobby_invite (*lobby_id*, *accept=False*)

Answer to a lobby invite.

Parameters

- **id** (*int*) – lobby_id to answer to.
- **accept** (*bool*) – answer to the lobby invite

destroy_lobby ()

Destroy the current lobby (host only)

Returns *job_id* for response

Return type *str*

chat

Chat channel features

class `dota2.features.chat.ChatBase`

Bases: `object`

class `dota2.features.chat.ChannelManager` (*dota_client*, *logger_name*)

Bases: `eventemitter.EventEmitter`

EVENT_JOINED_CHANNEL = `'channel_joined'`

When the client join a channel.

Parameters **channel** (*ChatChannel*) – channel instance

EVENT_LEFT_CHANNEL = `'channel_left'`

When the client leaves a channel.

Parameters **channel** (*ChatChannel*) – channel instance

EVENT_MESSAGE = `'message'`

On a new channel message

Parameters

- **channel** (*ChatChannel*) – channel instance
- **message** (*CMsgDOTAChatMessage*) – message data

EVENT_CHANNEL_MEMBERS_UPDATE = `'members_update'`

When users join/leave a channel

Parameters

- **channel** (*ChatChannel*) – channel instance
- **joined** (*list*) – list of members who joined
- **left** (*list*) – list of members who left

emit (*event, *args*)

Emit event with some arguments

Parameters

- **event** (*any type*) – event identifier
- **args** – any or no arguments

join_channel (*channel_name, channel_type=<DOTAChatChannelType_t.DOTAChannelType_Custom: I>*)

Join a chat channel

Parameters

- **channel_name** (*str*) – channel name
- **channel_type** (*DOTAChatChannelType_t*) – channel type

Returns join result**Return type** *int*Response event: *EVENT_JOINED_CHANNEL***join_lobby_channel** ()

Join the lobby channel if the client is in a lobby.

Response event: *EVENT_JOINED_CHANNEL***lobby**

References lobby channel if client has joined it

Returns channel instance**Return type** *ChatChannel***join_party_channel** ()

Join the lobby channel if the client is in a lobby.

Response event: *EVENT_JOINED_CHANNEL***party**

References party channel if client has joined it

Returns channel instance**Return type** *ChatChannel***get_channel_list** ()

Requests a list of chat channels from the GC.

Returns List of chat channels**Return type** *CMsgDOTAChatGetUserListResponse, None***leave_channel** (*channel_id*)**class** *dota2.features.chat.ChatChannel* (*channel_manager, join_data*)Bases: *object*

leave ()

Leave channel

send (*message*)

Send a message to the channel

Parameters **message** (*str*) – message text

share_lobby ()

Share current lobby to the channel

flip_coin ()

Flip a coin

roll_dice (*rollmin=1, rollmax=100*)

Roll a dice

Parameters

- **rollmin** (*int*) – dice min value
- **rollmax** (*int*) – dice max value

sharedobjects

Essentially a `dict` containing shared object caches. The objects are read-only, so don't change any values. The instance reference of individual objects will remain the same throughout their lifetime. Individual objects can be accessed via their key, if they have one.

Note: Some cache types don't have a key and only hold one object instance. Then only the cache type is needed to access it. (e.g. `CSOEconGameAccountClient`)

```
dota_client.socache[ESOType.CSOEconItem]          # dict with item objects, key = 
↪ item id
dota_client.socache[ESOType.CSOEconItem][123456] # item object

dota_client.socache[ESOType.CSOEconGameAccountClient] # returns a 
↪ CSOEconGameAccountClient object
```

Events will be fired when individual objects are updated. Event key is a `tuple`` in the following format: `(event, cache_type)`.

The available events are `new`, `updated`, and `removed`. Each event has a single parameter, which is the object instance. Even when `removed`, there is object instance returned, usually only with the `key` field filled.

```
@dota_client.socache.on(('new', ESOType.CSOEconItem))
def got_a_new_item(obj):
    print "Got a new item! Yay"
    print obj

# access the item via socache at any time
print dota_client.socache[ESOType.CSOEconItem][obj.id]
```

`dota2.features.sharedobjects.find_so_proto` (*type_id*)

Resolves proto message for given `type_id`

Parameters **type_id** (`dota2.enums.ESOType`) – SO type

Returns proto message or `None`

```
class dota2.features.sharedobjects.NO_KEY
dota2.features.sharedobjects.get_so_key_fields (desc)
dota2.features.sharedobjects.get_key_for_object (obj)

class dota2.features.sharedobjects.SOBase
    Bases: object

class dota2.features.sharedobjects.SOCache (dota_client, logger_name)
    Bases: eventemitter.EventEmitter, dict

class ESOType
    Bases: enum.IntEnum

    CMsgDOTATournament = 2009
    CSODOTAGameAccountClient = 2002
    CSODOTAGameAccountPlus = 2012
    CSODOTAGameHeroFavorites = 2007
    CSODOTALobby = 2004
    CSODOTALobbyInvite = 2011
    CSODOTAMapLocationState = 2008
    CSODOTAParty = 2003
    CSODOTAPartyInvite = 2006
    CSODOTAPlayerChallenge = 2010
    CSOEconGameAccountClient = 7
    CSOEconItem = 1
    CSOEconItemDropRateBonus = 38
    CSOEconItemEventTicket = 40
    CSOEconItemLeagueViewPass = 39
    CSOEconItemPresetInstance = 36
    CSOEconItemTournamentPassport = 42
    CSOItemRecipe = 5
    CSOSelectedItemPreset = 35

file_version = None
    so file version

emit (event, *args)
    Emit event with some arguments

    Parameters
        • event (any type) – event identifier
        • args – any or no arguments
```

2.1.2 client

Only the most essential features to `dota2.client.Dota2Client` are found here. Every other feature is inherited from the `dota2.features` package and its submodules.

class `dota2.client.Dota2Client` (*steam_client*)

Bases: `steam.client.gc.GameCoordinator`, `dota2.features.FeatureBase`

Parameters `steam_client` (`steam.client.SteamClient`) – Instance of the steam client

verbose_debug = `False`

enable pretty print of messages in debug logging

app_id = `570`

main client app id

ready = `False`

True when we have a session with GC

connection_status = `2`

`dota2.enums.GCConnectionStatus`

account_id

Account ID of the logged in user in the steam client

steam_id

`steam.steamid.SteamID` of the logged-in user in the steam client

wait_msg (*event*, *timeout=None*, *raises=None*)

Wait for a message, similiar to `wait_event()`

Parameters

- **event** – `EDOTAGCMsg` or job id
- **timeout** (`int`) – seconds to wait before timeout
- **raises** (`bool`) – On timeout when `False` returns `None`, else raise `gevent.Timeout`

Returns returns a message or `None`

Return type `None`, or *proto message*

Raises “`gevent.Timeout`”

send_job (**args*, ***kwargs*)

Send a message as a job

Exactly the same as `send()`

Returns jobid event identifier

Return type `str`

send_job_and_wait (*emsg*, *data={}*, *proto=None*, *timeout=None*, *raises=False*)

Send a message as a job and wait for the response.

Note: Not all messages are jobs, you’ll have to find out which are which

Parameters

- **emsg** – Enum for the message

- **data** (*dict*) – data for the proto message
- **proto** – (optional) specify protobuf, otherwise it's detected based on `emsg`
- **timeout** (*int*) – (optional) seconds to wait
- **raises** (*bool*) – (optional) On timeout if this is `False` method will return `None`, else raises `gevent.Timeout``

Returns response proto message

Raises `gevent.Timeout``

send (*emsg*, *data*={}, *proto*=None)

Send a message

Parameters

- **emsg** – Enum for the message
- **data** (*dict*) – data for the proto message
- **proto** – (optional) manually specify protobuf, other it's detected based on `emsg`

launch ()

Launch Dota 2 and establish connection with the game coordinator

`ready` event will fire when the session is ready. If the session is lost `notready` event will fire. Alternatively, `connection_status` event can be monitored for changes.

exit ()

Close connection to Dota 2's game coordinator

sleep (*seconds*)

Yeild and sleep N seconds. Allows other greenlets to run

idle ()

Yeild in the current greenlet and let other greenlets run

2.1.3 enums

class `dota2.common_enums.ESOType`

`CSOEconItem` = 1

`CSOItemRecipe` = 5

`CSOEconGameAccountClient` = 7

`CSOSelectedItemPreset` = 35

`CSOEconItemPresetInstance` = 36

`CSOEconItemDropRateBonus` = 38

`CSOEconItemLeagueViewPass` = 39

`CSOEconItemEventTicket` = 40

`CSOEconItemTournamentPassport` = 42

`CSODOTAGameAccountClient` = 2002

`CSODOTAParty` = 2003

```
CSODOTALobby = 2004
CSODOTAPartyInvite = 2006
CSODOTAGameHeroFavorites = 2007
CSODOTAMapLocationState = 2008

2.1.4 msg

Various utility function for dealing with messages.

```
dota2.msg.get_emsg_enum(emsg)
```

Attempts to find the Enum for the given `int`

Parameters `emsg` (`int`) – integer corresponding to a Enum

Returns Enum if found, `emsg` if not

Return type Enum, `int`

```
dota2.msg.find_proto(emsg)
```

Attempts to find the protobuf message for a given Enum

Parameters `emsg` (`Enum`) – Enum corresponding to a protobuf message

Returns protobuf message class

2.1.5 utils

```
dota2.utils.replay_url(match_id, cluster, replay_salt, app_id=570)
```

Form url for match replay

Parameters

- `match_id` (`int`) – match id
- `cluster` (`int`) – cluster the match is saved on
- `replay_salt` (`int`) – salt linked to the replay
- `app_id` (`int`) – (optional) `app_id` for dota

Returns url to download the replay of a specific match

Return type `str`

```
dota2.utils.replay_url_from_match(match, app_id=570)
```

Form url for match replay

Parameters

- `match` (`proto message`) – `CMsgDOTAMatch`
- `app_id` (`int`) – (optional) `app_id` for dota

Returns url to download the replay of a specific match, `None` if match has not all the information

Return type `str`, `None`

`dota2.utils.metadata_url` (*match_id*, *cluster*, *replay_salt*, *app_id=570*)

Form url for match metadata file

Parameters

- `match_id` (*int*) – match id
- `cluster` (*int*) – cluster the match is saved on
- `replay_salt` (*int*) – salt linked to the replay
- `app_id` (*int*) – (optional) `app_id` for dota

Returns url to download the metadata of a specific match

Return type `str`

`dota2.utils.metadata_url_from_match` (*match*, *app_id=570*)

Form url for match metadata file

Parameters

- `match` (*proto message*) – `CMsgDOTAMatch`
- `app_id` (*int*) – (optional) `app_id` for dota

Returns url to download the metadata of a specific match, `None` if match has not all the information

Return type `str`, `None`
